

How to Tape The Inner Tablet Box

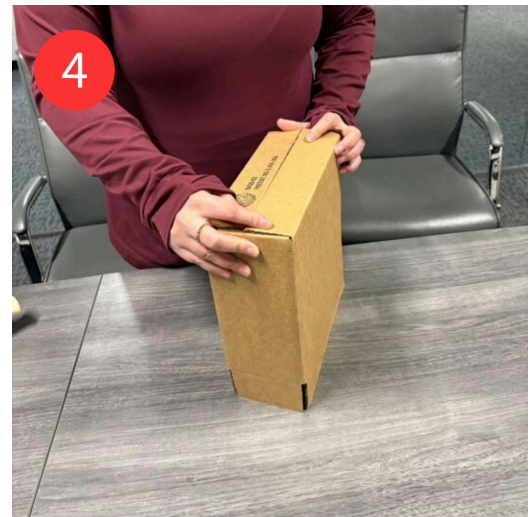

Step 1: Take one inner tablet box with a pre-installed divider from the skid.

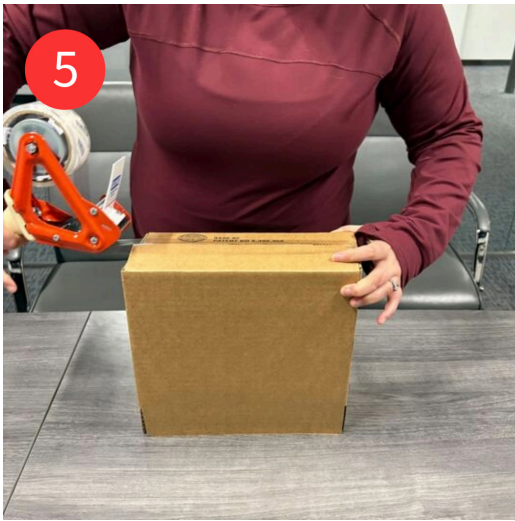

Step 2: Press the edges inward to expand and open the box.

Step 3: Position the box upright with the divider facing upward. Fold the small flaps down first.

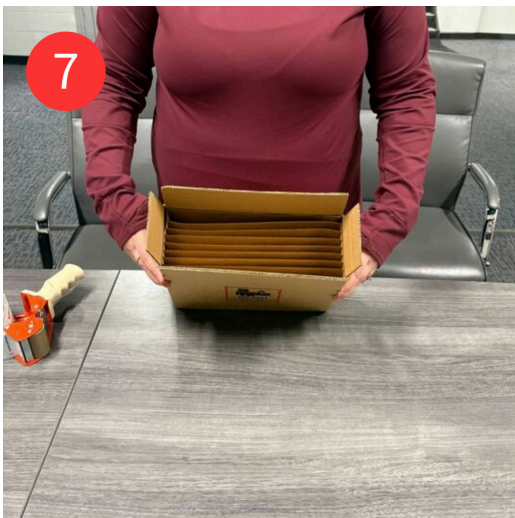

Step 4: Then, fold the large flaps down.

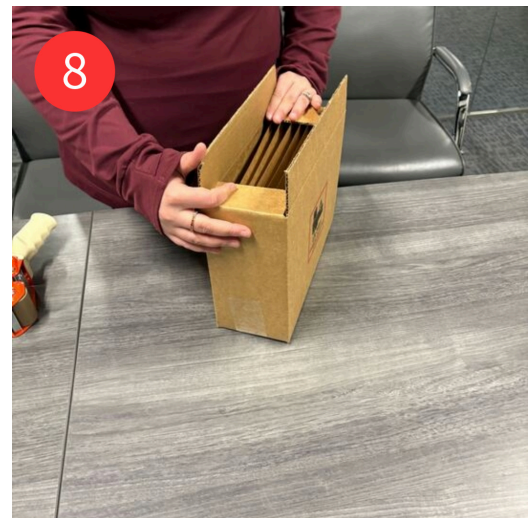

Step 5: While holding the two large flaps in place, apply tape across the seam between them to secure the bottom of the box.

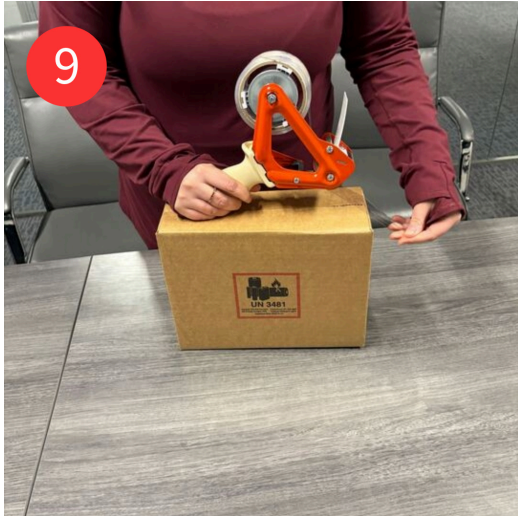

Step 6: The bottom of your box is now securely sealed.

Step 7: Flip the box over so the exposed divider faces up, this is the top of your box. Fill the box with tablets. Once full, repeat steps 3-6 to close and secure the top of the box.

Step 10: Place two fully packed and sealed inner tablet boxes inside the outer tablet box.
